Function C: Off-Delay Relay with Control Signal

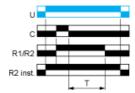

Description

After power-up and closing of the control contact C, the output R closes. When control contact C re-opens, timing T starts. At the end of the timing period, the output(s) R revert(s) to its/their initial state. The second output can be either timed or instantaneous.

Function: 1 Output

Function: 2 Outputs

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.)

Legend

- C Control contact
- G Gate
- R Relay or solid state output

R1/ 2 timed outputs

R2

 $\ensuremath{\mathsf{R2}}$ The second output is instantaneous if the right position is selected inst.

No galvanic isolation between supply terminals and control inputs.

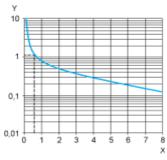

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Performance Curves

A.C. Load Curve 1

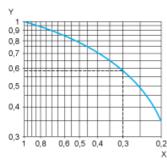

Electrical durability of contacts on resistive loading millions of operating cycles

- X Current broken in A
- Y Millions of operating cycles

A.C. Load Curve 2

Reduction factor k for inductive loads (applies to values taken from durability curve 1).

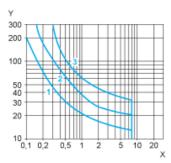

- X Power factor on breaking ($\cos \phi$)
- Y Reduction factor k

Example: An LC1-F185 contactor supplied with 115 V/50 Hz for a consumption of 55 VA or a current consumption equal to 0.1 A and cos ϕ = 0.3. For 0.1 A, curve 1 indicates a durability of approximately 1.5 million operating cycles. As the load is inductive, it is necessary to apply a reduction coefficient k to this number of cycles as indicated by curve 2. For cos ϕ = 0.3: k = 0.6 The electrical durability therefore becomes:1.5 10⁶ operating cycles x 0.6 = 900 000 operating cycles.
