## Description

The timing period $T$ begins on energisation. After timing, the output(s) R close(s). The second output can be either timed or instantaneous.
Function: 1 Output

Function: 2 Outputs

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.)

## A.C. Load Curve 1

Electrical durability of contacts on resistive loading millions of operating cycles

X Current broken in A
Y Millions of operating cycles

## A.C. Load Curve 2

Reduction factor $k$ for inductive loads (applies to values taken from durability curve 1).

$X \quad$ Power factor on breaking $(\cos \phi)$
Y Reduction factor $k$
Example: An LC1-F185 contactor supplied with $115 \mathrm{~V} / 50 \mathrm{~Hz}$ for a consumption of 55 VA or a current consumption equal to 0.1 A and cos $\phi=0.3$. For 0.1 A , curve 1 indicates a durability of approximately 1.5 million operating cycles. As the load is inductive, it is necessary to apply a reduction coefficient $k$ to this number of cycles as indicated by curve 2 . For $\cos \phi=0.3$ : $k=0.6$ The electrical durability therefore becomes:1.5 $10^{6}$ operating cycles $\times 0.6=900000$ operating cycles.
