

**1-Channel Relay Output Module 230 V AC, 16 A**

Isolated output; 1 make contact; bistable; manual operation

Delivered without miniature WSB markers

A connected actuator or load is switched via the relay output module. The 24VDC supply is derived from the power jumper contacts to trigger the relays. The switched status of the relay is shown by the manual switch (1/0). The operating mode can be set using a manual/automatic selector switch. The mode status is indicated by an LED and via status bits in the process image.

**Manual:** Coil triggering is interrupted. Actuation only via the red manual operating switches.

**Auto:** The relay is operated via the control system. Manual status changeover via manual operating switch is canceled by the control system in less than 500ms.

The manual switch can also be used without 24V supply to switch the output ON.

The relay meets both international standards of IEC and DIN EN 61810 part 1 /VDE 0435 part 201 as well as overload and short circuit requirements of IEC and DIN EN 61036 /61037.

## 4-Channel Analog Input Module for Resistance Sensors

Temperature Range: -30 °C ... +150 °C

Delivered without miniature WSB markers

The input module directly connects to selected Pt or Ni resistance sensors. It can only be operated as a 4-channel (2-conductor technology) module. Its temperature range is restricted to -30 °C to +150 °C.

The module automatically linearizes the entire temperature range.

A sensor error is indicated by a red LED. The module can be configured via WAGO-I/O-CHECK or GSD files.

The module features multiple setting options and high accuracy.
