

2-Channel Analog Output Module 0-10 V

10 bits, 10 mA

Delivered without miniature WSB markers

The analog output module generates signals of a standard magnitude 0–10 V.

The output signal is electrically isolated and transmitted with a resolution of 10 bits.

The outputs are short-circuit proof.

Each channel is equipped with an LED to indicate short-circuits or overloads $\geq 15\text{mA}$.

The shield (screen) is directly connected to the DIN rail.

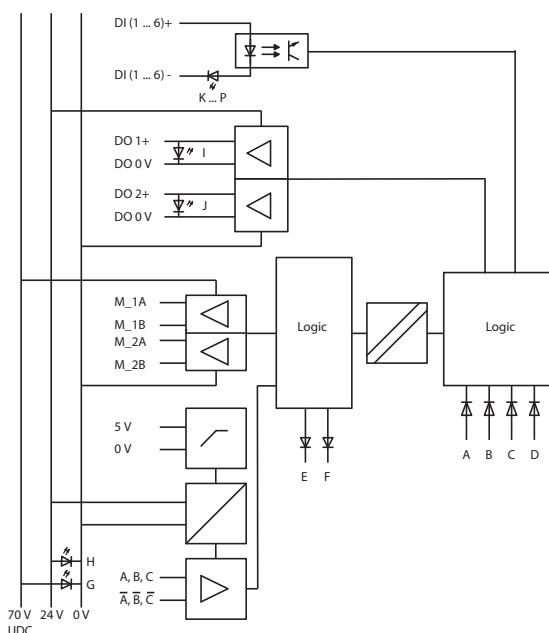

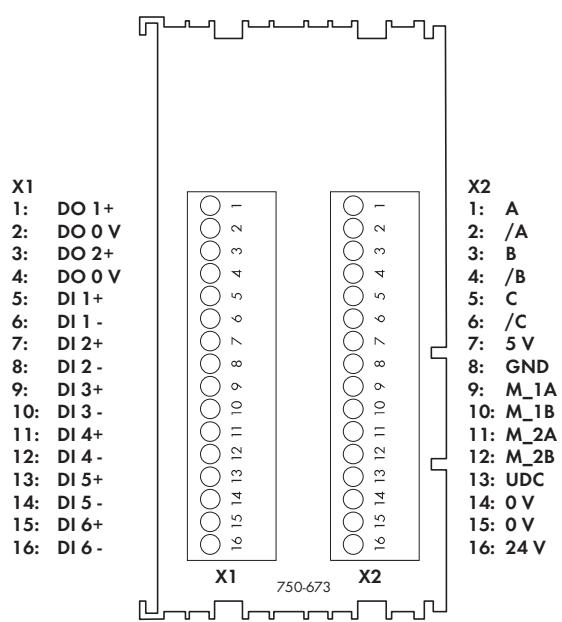

Both the internal system and field side supply are used to power the module.

The output channels have one common ground potential.

The analog outputs and the 24V supply have one common ground potential so that actuators such as servo drives can be connected using a 3-conductor cable.
