Alarm Outputs

Each alarm can be independently set to one of the following 13 alarm types. The default is 2: *Upper limit*.

Auxiliary outputs are allocated for alarms. ON delays and OFF delays (0 to 999 s) can also be specified.

Note: For models with heater burnout, SSR failure, and heater overcurrent detection, alarm 1 will be an OR output of the alarm selected from the following alarm types and the alarms for heater burnout, SSR failure, and heater overcurrent. To output only a heater burnout alarm, SSR failure alarm, and heater overcurrent alarm for alarm 1, set the alarm type to 0 (i.e., no alarm function).

Electrical Life Expectancy Curve for Relays (Reference Values)

External Connections

- A voltage output (control output, for driving SSR) is not electrically insulated from the internal circuits. When using a grounding thermocouple, do not connect any of the control output terminals to

ground. (If the control output terminals are connected to ground, errors will occur in the measured temperature values as a result of leakage current.)

Controllers

Control output 1
 Relay output
 250 VAC, 2 A (resistive load)
 Voltage output (for driving SSR)
 12 VDC, 21 mA
 Current output
 0 to 20 mA DC
 4 to 20 mA DC
 Load: 500 Ω max.

Auxiliary outputs
 Relay outputs
 250 VAC, 2 A (resistive load)
 Note: The terminals for auxiliary output 2 are on the bottom of the case. The connection screws for auxiliary output 2 are on the side of the case. (This applies only to models with 2 auxiliary outputs.)

The E5GN-□□□□□□ is set for a K thermocouple (input type of 5) by default. If a difference sensor is used, an input error (5.EPR) will occur. Check the setting of the input type parameter.

A heater burnout alarm, heater short alarm, heater overcurrent alarm, or input error is sent to the output to which the alarm 1 function is assigned.

Waterproof Packing

Y92S-32 (for DIN 48 × 24)

Order the Waterproof Packing separately if it becomes lost or damaged. The Waterproof Packing can be used to achieve an IP66 degree of protection. (Deterioration, shrinking, or hardening of the waterproof packing may occur depending on the operating environment. Therefore, periodic replacement is recommended to ensure the level of waterproofing specified in IP66. The time for periodic replacement depends on the operating environment. Be sure to confirm this point at your site. Consider one year a rough standard. OMRON shall not be liable for the level of water resistance if the customer does not perform periodic replacement.) The Waterproof Packing does not need to be attached if a waterproof structure is not required.
