» Machine Management

realizing

Machine Control at Your Fingertips. On-screen Machine Management.

Expanding markets in emerging countries, short product cycles, and diversifying customer needs are just some of the factors that create drastic changes for the production industry.

To win in severe global market competition, you have to continue to grasp industry changes quickly, understand user needs accurately, and provide diverse forms of added value.

OMRON will help you handle ever-changing customer needs with the three keywords of the NS Series.

Let Your Machines Evolve

Best Match
OMRON has provided even greater compatibility with OMRON PLCs and components to provide an advanced design process that lets you achieve appealing machines.
Machine Management
The NS Series transforms machine HMIs from simple operation panels and turns them into machine management tools.

Proven Reliability
The NS-series PTs have a proven track record that will take your machines to a higher level of reliability.

NS Series

The Best Match Possible

The amount of work and cost of connecting to OMRON PLCs and components have been greatly reduced. The results is an incredible range of features that is possible only when unifying to one manufacturer. Connecting to the NJ-series Machine Automation Controller allows the machine designer to quickly achieve the features required by the user through support for improved troubleshooting and structured programming with structures and other new data types.

Machine Management Tool

The machine designer can easily implement PLC troubleshooting, machine troubleshooting, settings for servo drives, temperature controllers, and other control components, status monitoring of connected devices, and uploading/downloading of parameters.

Proven Reliability

In the ten years since initial marketing, OMRON has globally supplied numerous HMI solutions with the highly reliable NS Series at over 200 sales and service centers around the world.

NS Series Lineup

This powerful lineup showcases OMRON's unique value.

Choose from 3 types to match your application and requirements.

NS Series

Standard Models

Plentiful screen variations and diverse functions allow use in a wide variety of applications.

15 inches | Color TFT

NS15-TX
- 32,768 colors
- XGA 1024 x 768 pixels

Software

CX-Designer
Without screen creation and ladder programming, the CX-Designer Screen Design Software is so easy-to-use that anyone can master it.

NS-Runtime
This software enables PLC communications from a personal computer by manipulating PT screens created using the CX-Designer.

A Revolutionary Best Ma

The NS-series PTs provide revolutionary compatibility with the road-proven CS/CJ-series the new NJ-series Controllers to achieve even greater added value in user machines.

The NJ-series Machine Automation Controllers Revolutionize Productivity

You can create a flexible, high-speed, high-precision system based on the NJ-series Machine Automation Controllers.
Use tags to access any memory areas, or troubleshoot machines and systems by using the NS-series PTs to make the most of the strengths of the NJ-series Controllers and to manage machines.

EtherNet/IP

EtherCAT
**The CS/CJ-series PLCs for
the Reliability of a Proven
Track Record**

Features are provided to easily connect to
CS/CJ-series PLCs to take advantage of their
proven track record.
Many features that do not require screen
creation or programming support everything
from design through maintenance to take
advantage of the compatibility of OMRON
PLCs and PT and to serve as the face of your
machines.

Design

For Machine Automation Controllers NJ-series

Use Integrated NS-series PT simulation or NJ troubleshoot by using the NS-series PTs to make the most of the strengths of the NJ-series Controllers and to manage machines.

NJ Troubleshooter

Controller Errors

### Standard Feature for NJ-series Controllers

Errors are automatically detected and displayed on-screen along with corrective actions for the CPU Unit function modules, EtherCAT slaves, and CJ-series Units that are connected in the NJ-series Controller. Whenever an error might occur, you can recover normal operation quickly to reduce downtime without using user manuals or Support Software on a computer.

NJ Controller

User-defined Errors

No Work Is Required to Create Alarm Screens.

Frames for alarm screens are provided as standard features in the NS-series PTs. You do not need to create screens to complete alarm screens.
Management of the meanings of alarms is unified on the Controller, so you do not have to register, add, or correct addresses on the NS-series PTs.

Excel	Sysmac Studio	NJ Controller	
Alarm Specifications	Alarm Registration and Programming Detection Conditions	Unified Alarm Definitions	No screen creation is required

Copy and Paste → Transfer → Alarms displayed

Integrated NS-series PT simulation

Improved debugging efficiency

"Integrated simulation" of Sysmac Studio enables offline debugging of the screen data for the NS-series PTs and sequence program for the NJ-series on the computer.

* Sysmac Studio version 1.02 or higher (CX-Designer version 3.41 or higher) is required.

Select Integrated Simulation.

Select image data and host to simulate.

Test screen of CX-Designer appears after synchronization of Sysmac Studio, and integrated simulation starts.
Troubleshooter

A Troubleshooter is provided for the connected OMRON Controller or PLC. This greatly reduces work requirements.

CS/CJ-series PLC Troubleshooter

Constantly monitors PLC errors.

Automatically detects PLC errors and displays the error details and recovery procedure on the screen. Even if a problem occurs, it can be resolved quickly without referring to the manuals.

CS/CJ/CP-series PLC

Note: A special template is required when using this function. The screen template is supplied with CX-Designer of version 2.1 or later. This function is a standard feature in the NSJ-series PTs.

Machine Troubleshooter

Easier Design of Machine Error Screens

Individual error screens that were previously made for each error can now be integrated into one. It is possible to switch only the error details (text and screen) without ladder programming in conjunction with the alarm bit.

With this system, this frame is shared, and the error details in the pink frames are switched with an alarm or other item as the trigger.

Text selection | **Image selection**

Specific Example

in conjunction with an alarm bit (See note.)

Alarm bit 10.01 ON (no paper)

Alarm bit 10.02 ON (printing error)

Note: Alarms, PLC/PT memory, and other items can be selected for the switching trigger.

11

Design

Best Match with OMRON Products

NS Series is the most suitable HMI for the system that comprises OMRON components. The advantage is the "compatibility (reducing programming and screen data creation work)" which will reduce the amount of designing work.

NS

No Screen Designing / No Programming
PLC CPU Unit monitoring screen
Device monitor
PLC Data Trace
Temperature Controllers

PLC

CPU Bus Units and Special I/O Units
- SAP Library

Remote I/O Terminal

Inverter

Vision Sensor
- 260,000-color video input

Temperature Controllers

Servomotor Servo Driver

Smart Active Parts (SAP Library)

Dramatically reduces the effort required to create ladder programming and screens.

More than 3,000 Library parts (Smart Active Parts) are available, which can directly access OMRON PLCs and components. The objects can just be pasted from the Smart Active Parts (SAP Library) Library to the screen; it is completely unnecessary to create screens and ladder programming.
The Temperature Controller's setting and monitor screens are completed in no time.

ACCESS

ACCESS

SAP Library, Temperature Controller Parts

CX-Designer Screen Design Software
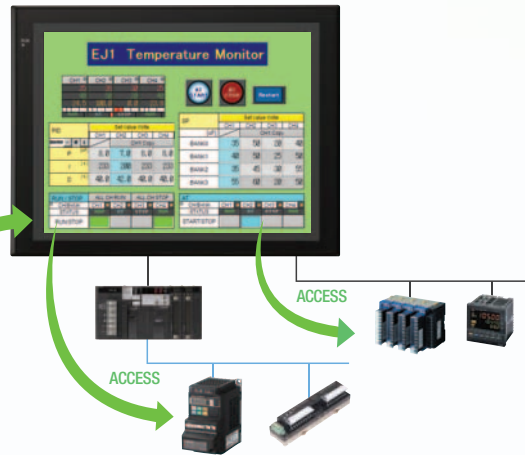

Support tool objects can be incorporated to check for errors and make settings, even without a computer.

Plenty of support tool objects (the Tool Function SAP Library) are available, which can be easily incorporate support tool functions in the NS-series PT. Just paste the support tool objects in the screen to check for errors and make settings, even without a computer.

Computer support tools

From
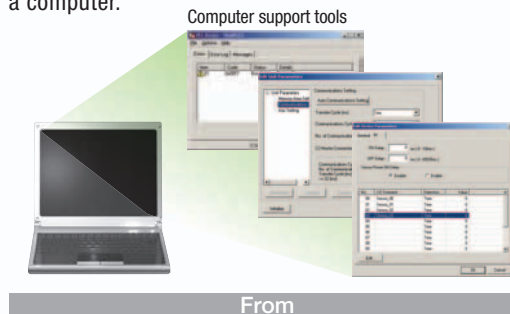

Example screens using support tool objects (Tool Function SAP Library)

PLC CPU Unit monitoring screen

NCF Unit setting screen

DeviceNet monitoring screen

To

CPU Bus Unit and Special I/O Unit Troubleshooting Can Be Also Performed with the SAP Library.

A Troubleshooter SAP Library is available to troubleshoot each Unit in the PLC. When an error occurs in a Unit, the Troubleshooter SAP Library provides an easy-to-understand explanation of the cause of the error as well as the countermeasures.

Note: The Troubleshooter SAP Library is included as a standard feature for the CX-One and CX-Designer. For details, refer to page 56. Successive development for Ethernet Units and MC Units is planned for the future.

Troubleshooter SAP for a Position Control Unit

Troubleshooter SAP for Basic I/O Unit

13
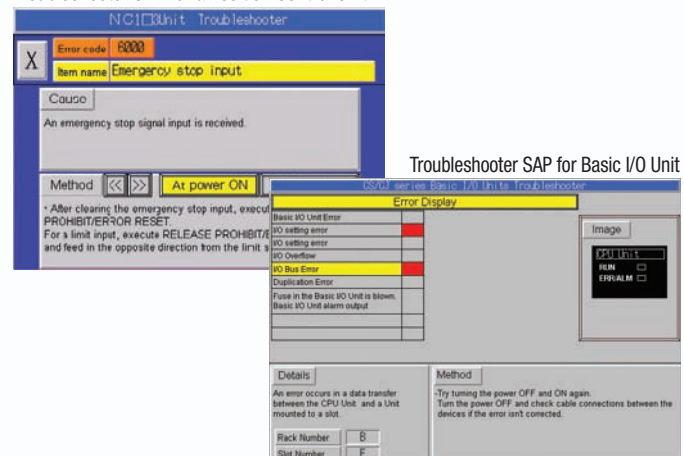

Design

EtherNet/IP

Support for data structures

This special feature is made possible by combining an OMRON CJ2 PLC with an NS-series PT. The data structures that you define on the Programming Tool can be used on the CX-Designer simply by dragging and dropping them.

Note: An EtherNet/IP connection is required.
For CJ2 Series, CX-Designer version 3.2 or later, and NS system version 8.4 or later are required.
For NJ5, CX-Designer version 3.3 or later, and NS system version 8.5 or later are required. For NJ3, CX-Designer version 3.4 or later, and NS system version 8.61 or later are required.Moreover, the multidimensional array is supported in the combination with NJ.

Specifications

Simultaneous and parallel engineering

The host applications can be designed using the tag names of the PLC and PT. Parallel development will shorten the design time.

FROM

Case 1
Previously, the PLC program was first created, and then the ladder program was referenced to create the screens.

PLC — Ladder program is created. — Programmable Terminal screens are created.
Programmable Terminal

Case 2
The screen graphics are created in advance, and then addresses are allocated and checked after the ladder program is completed.

PLC — Ladder program is created. — The addresses are set.
Programmable Terminal — Programmable Terminal screens are created (graphics only).
Programmable Terminal — Addresses are allocated and the allocations are checked

TO

By simply setting tag names, PLC and Programmable Terminal programming can be performed in parallel.

Specifications

Tag name	Address
Number_produced	Undetermined
Number_of_times	Undetermined
⋮	⋮

CJ2/NJ

Addresses are determined while creating the ladder program.
Ladder program is created.

EtherNet/IP
The screens are created.
The screens are created with no need to pay attention to addresses.
**NS Series**

Design time is shortened.

Minimize side effect of address changes

It is possible to access memory with tags, so the PT and host application are not affected even if the address of data in the PLC is changed.

Specific Example

1. With the CX-Programmer, the address for the tag named "Number_produced" is changed from D100 to H200.

No change required.
Host application

Tag name	Address
Number_produced	D100

Number_produced
Number_produced
Accessed using a tag.

Change

| Number_produced | H200 |

2. Applications and the PT are accessed using tags, and so changes do not need to be made at other devices. Even after the change, the number of items produced is acquired correctly from H200.

CJ2/NJ
EtherNet/IP
No change required.
NS Series

15

Design

Direct Connection to Temperature Controllers

Connect OMRON Temperature Controllers directly to the NS-series PT.

OMRON Temperature Controllers can be connected directly to the NS-series PT's RS-232C port. Data does not pass through the PLC, so ladder programming is not required. Also, there are plenty of objects in the SAP Library for Temperature Controllers, and Temperature Controller screens can be created easily just by pasting objects from the SAP Library to the screens.

Note: An RS-422A Serial Adapter is needed to connect directly to a Temperature Controller. Refer to page 53 for a list of the Temperature Controllers that can be connected. A Conversion Unit is not required to connect to the RS-422A/485 serial interface of the NS15.

OMRON Temperature Controllers

OMRON Temperature Controllers

CJ1W-CIF11 RS-422A Serial Adapter
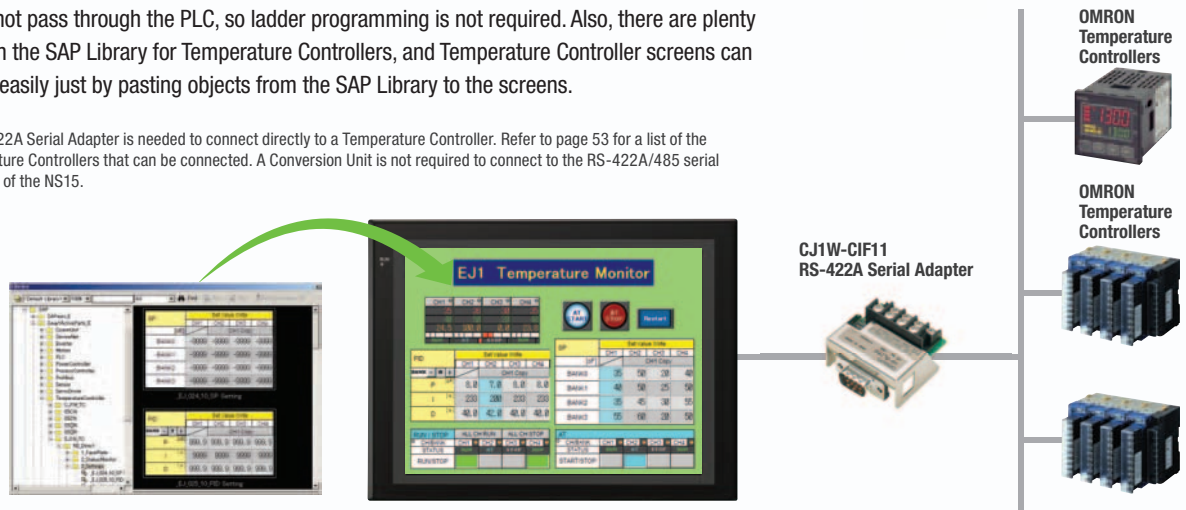

Face Plate Auto-Builder for NS

Screens for Loop Controllers can be easily and automatically created.

Significantly reduces the effort required to combine a Loop Controller with an NS-series PT.

| Easy automatic generation of faceplates, such as faceplates for PV monitoring and SV setting, as well as tuning screens, such as screens to set and autotune PID constants.

| A total of 17 function blocks are supported, with eleven function blocks, such as Ratio Setting and Motor Manipulators newly supported (version 3 of higher).

| Comments are automatically entered for automatically assigned unit and scale settings when a project is generated (version 3 and higher).

CX-Process Tool
(Loop Controller Programming Software)
● Loop Controller program creation (function block method)
● CSV tag file output

CSV tag file for Loop Controller

NS project file

Face Plate Auto-Builder for NS

NS Series
Created screens are easily transferred to the NS by using a Memory Card or over the network.

CX-Designer
(NS screen creation software)
● Editing created data
● Creation of other required screens

Note: Refer to the PLC-based Process Control Catalog (Cat. No. P051) and the Loop-control CPU Unit Catalog (Cat. No. R128) for details on Loop Controllers.

Multi-language Support

Support 42 languages and switch the language of the labels among up to 16 languages.

Unicode is supported and 42 Asian and European languages can be combined in screens. Also, it is possible to switch between up to 16 labels using the label switching function, so it is possible to support up to 16 languages in a single screen just by specifying the language to be displayed in each label.

NS Series

Support for 42 International Languages

Thai Displays Also Supported

ราชอาณาจักรไทย

**Multi-language CSV data**

Import

The labels' text attributes can also be reflected when importing.

When screen data is imported, text attributes can be applied to the specified labels and attributes such as the font and text color can be reflected to other languages labels.
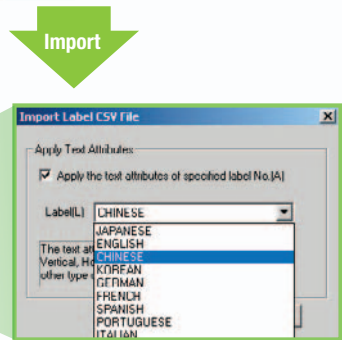

## Multi-language conversion has become much easier.

The screen data in the source language is exported to a CSV file and sent to a translation agency by e-mail for translation. Later, the translated CSV file is just imported to easily provide multi-language support.

Dual-language input in Excel by translation companies and local companies

Note: Windows XP (Service Pack3 or higher), Vista or 7 is required for multi-language support.

Multi-language System Messages. Eight Languages Supported as Standard Feature

The system program of NS-series PTs supports Chinese and European languages. All eight languages are a standard feature, including Chinese (traditional and simplified), Spanish, Italian, German, and French, in addition to the previous Japanese and English. Along with maintenance menus, messages for communications errors, communications settings, and screen transfers can be displayed in any of eight languages. Maintenance can be performed in the desired language. The language can be easily set using the NS-series PT or screen data.

Plentiful Graphing Functions

## Data Log Graph (Trend Graph)

Up to 128 data can be collected in the cycle of 500ms. Logging data is stored as a CSV file in the Memory Card inserted in the NS-series PT.

Logging data is stored as a CSV file in the Memory Card mounted in the NS-series PT. The data stored in the Memory Card can be read or deleted from the screen.

The log data files in the Memory Card appear as shown below when the read file button is pressed.

Show the current logging graph
Trd00004.csv 04/08/23 21:16
Trd00003.csv 04/08/23 21:15
Trd00002.csv 04/08/23 21:14
Trd00001.csv 04/08/23 21:13

Read file button

A log can be saved automatically, without any programming, just by selecting the Save the data periodically Option in the Data Log Setting Window.

Suffixes are automatically added to file names set in the CX-Designer.

Memory Card

Auto-matically saved

Logging data for each day (43,200 points) is saved in the Memory Card in CSV format.

LOG001.CSV 04/06/04 10:00
LOG002.CSV 04/06/05 10:00
LOG003.CSV 04/06/06 10:00
LOG004.CSV 04/06/07 10:00
LOG005.CSV 04/06/08 10:00
LOG006.CSV 04/06/09 10:00
LOG007.CSV 04/06/10 10:00

It is possible to make a one-week log by automatically saving the data seven times.

Line Graph Function

The data logged by the PLC can be displayed in overlapping graphs, so a device's operation can be compared for evaluation and analysis. In addition, up to 1,000 words of consecutive data can be displayed as a line graph, data can be displayed together, and any region can be magnified.
(1) Graphs can be superimposed.
(2) The display can be magnified.

Continuous Line Function

Any position from the host (PLC) can be plotted as a graph. A graph can be plotted in any position by specifying the X and Y coordinates of the vertices. Also, the graph can be moved on the screen by specifying the movements from the PLC.

PLC

D0000	X1
D0001	Y1
D0002	X2
	Y2
	X3
	Y3

Information in the PLC's format can be plotted moment-by-moment.
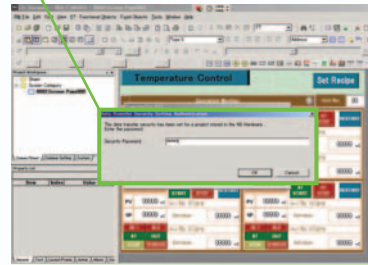

Design

Screen Data Security Functions

Protect important screen data with a password.

If password protection is set in the data transfer security settings when the screen data is designed, a password must be entered to download or upload the screen data, so important screen data can be protected.

Security password

A password between 4 and 64 characters long can be set. The download/upload will start if the user inputs the password that was set when the screen was designed. (Password input will be disabled if the wrong password is input 3 times in a row.)

Download
Upload

Download
Upload

If a password has been set, the password is required to transfer screen data (download or upload) with the Memory Card.
Device Data Transfer

Easy Data Exchange between the PLC and Components

For example, temperature controller alarm values can be transferred to the DM Area of the PLC's CPU Unit. No communications programming or macros are required.

Multi-vendor Support

Devices from multiple vendors are supported. Data can be easily exchanged with PLCs from other companies and Modbus devices.
Easy Settings

To make the settings, simply specify the device and addresses of the transfer source and transfer destination in the CX-Designer. Settings can be made using the same procedure as for setting the addresses for normal components.

### Easier Operation when Combining SAP Library Objects

SAP data can also be exchanged. SAP data can be exchanged by checking the address of the SAP data in the dialog box of the SAP object pasted in the CX-Designer and specifying that address as the transfer source address.

Note 1: EtherNet/IP tags are not supported.
Note 2: CX-Designer version 3.1 or higher is required.
　　　　NS system version 8.2 or higher is required.

NS Screen Templates NEW

The CX-Designer of version 3.5 or higher provides the palette to display objects and templates (scheduled for auto update in August 2012). Refer to the next page for details of the palette.
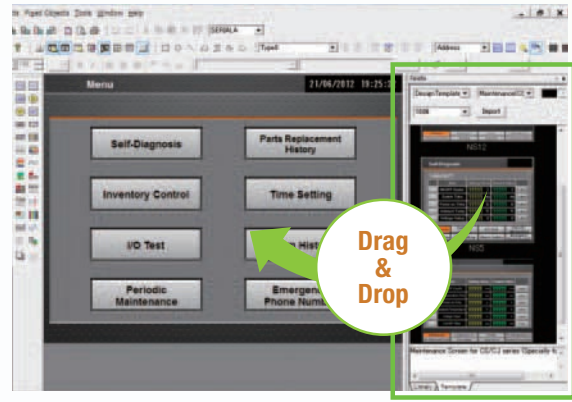

Even Simpler

Templates can be read into the screen by just dragging and dropping thumbnails displayed on the palette.

The template consisting of multiple screens allows multiple screens to be read by dragging and dropping it once.
The Address Setting Dialog Box that is displayed to read templates is useful for changing addresses all at once.

Even More Beautiful

The refined templates enable you to use the NS Series with the screens that have a sense of unity in design.

Three different types of templates besides default screens are provided. The design can be changed easily with "Theme Name" that is displayed when dragging and dropping.

Design

Screen Designer for NS Series, CX-Designer

User-friendly Screen Creation

Without screen creation and ladder programming, the CX-Designer Screen Design Software is so easy-to-use that anyone can master it. Quickly create the required screen by dragging and dropping objects. OMRON's unified development environment lets you drastically reduce the work required to create screens.

Note: The same type of Project Workspace and Output Window as in the CX-Programmer are provided for the user interface.

All addresses and comments can be managed using a single Symbol Table.
Shows a list of addresses, names, and comments used in project screen data. Addresses, names, and I/O comments for the CX-Programmer can also be imported.

Improved Icons and Help

Objects and templates can be selected easily from the palette. `NEW`

Easy-to-use, well-designed, and super-beautiful objects and templates can be read into the screen by dragging and dropping. Templates can be chosen from four different designs.

The project Workspace enables the user to look through the entire project.

- Screens you want to edit can be opened right away.
- Perform screen management, such as copying or deleting screens, by simply right-clicking.
- Reusing screens from other projects is easy with the CX-Designer.
- Settings for alarms, data logs, communications, and other functions can be easily accessed.

Drastically reduce the number of clicks in the project.

Just click on the object once to display or change properties. Multiple objects can be selected to display and change shared properties all at once.

The Output Window shows search results.

In addition to addresses and I/O comments used in screen data, labels can also be used as search strings and the results can be displayed.

Specifications

Palette `NEW`

Switches, lamps, and templates are registered in the palette.
Just drag and drop them on the new or existing screen to add.

Note. CX-Designer version 3.5 or higher is required.
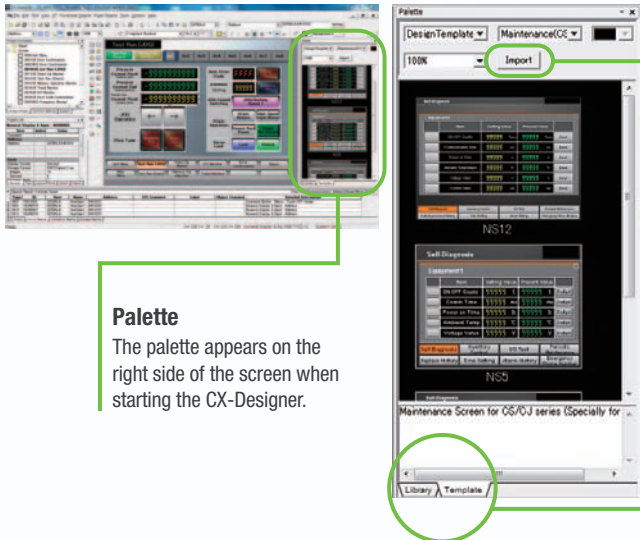

Palette
The palette appears on the right side of the screen when starting the CX-Designer.

Import
The Import button allows new objects and templates to be added to the palette.

Library and Template tabs at the bottom left of the palette

Library
Parts list of switches and lamps is displayed.

Template
Templates are displayed in thumbnailed form.

Library

Switches and lamps are registered in the library. Select a switch, lamp, or other object from the pull-down menu. You can register switches you created or other objects you often use in "User-defined".
Color Setting
Display colors of objects registered in the library can be changed easily by selecting colors from pull-down menus.

Change display color to blue.
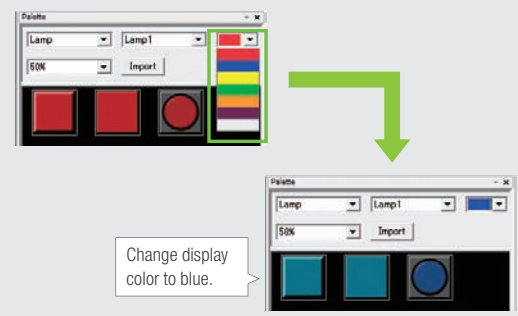

Template

Templates include design templates and device templates.

A template consists of multiple screens. Multiple screens are pasted on the screen by dragging and dropping a thumbnail on the screen.

- **Design Template**

  Design templates are the screen templates designed professionally. Addresses can be changed with "Address Setting Dialog Box".

- **Device Template**

  As well as SAP (Smart Active Parts), addresses on the screen are automatically updated by changing unit number of Temperature Controller or Special I/O Unit with "Unit No Dialog Box".

Drag & Drop
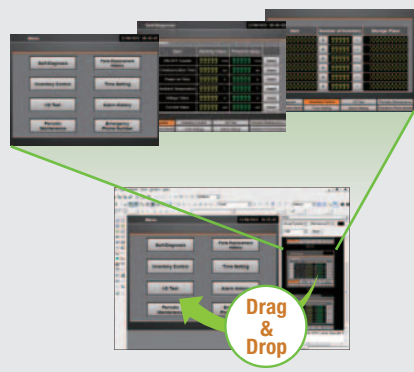

Design

Reading Another Project's Screens and Objects

Resources from another project can be easily reused by just selecting the screen or objects that you want to read and dragging and dropping it, so screens can be created intuitively.

Example screen 1 Select the screen that you want to read, drag it to the destination, and drop it.
Example screen 2 Select the part that you want to read, drag it to the destination, and drop it.
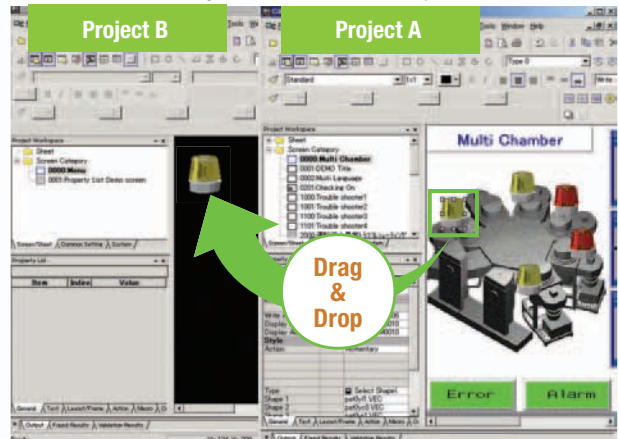

Reading CAD Files

It is possible to import DXF files by dragging and dropping them. The files are read as a diagram, and so less capacity is used than with images. It is also easy to customize the diagram by changing the shape or color.
The screen data and ladder program can be checked simultaneously in the computer.

The CX-Designer and CX-Programmer interconnects the test functions in the computer through the CX-Simulator. The screens and ladder program checks are performed simultaneously, which significantly increases debugging efficiency. The CX-Programmer also has a new button for integrated simulation. And, work efficiency is further improved with the ability to keep required work screens pinned on front and to zoom in or out as desired.

Specifications
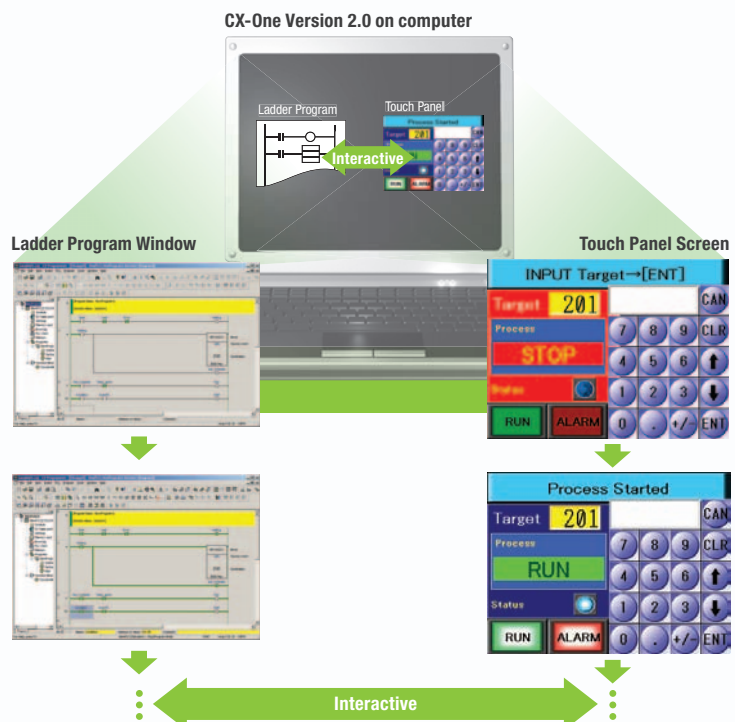

Reading the Symbol Table

The symbol table created in the CX-Programmer during ladder programming can be read into the CX-Designer by dragging and dropping, so it isn't necessary to manually data such as input addresses and I/O comments. Tags (i.e., network symbols) can also be read into the CX-Designer.

Note: Version 8.0 or higher of the CX-Programmer support tags (i.e., network symbols).

CX-Programmer's symbol table

Drag & Drop

CX-Designer's symbol table

The CX-Programmer's symbol table can be dragged and dropped!
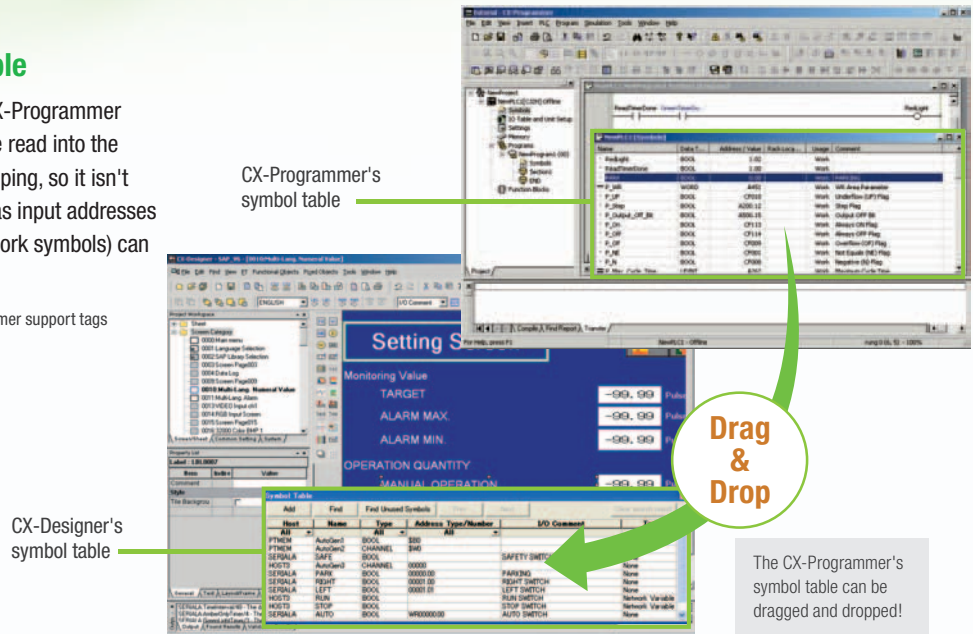

Example of Reading the Symbol Table

The symbol table read from the CX-Programmer can be directly dragged and dropped to the touch switch and lamp.

(1) Create a switch on the screen.

STOP BUZZER

(3) Allocations for buttons and lamps can also be checked on the screen using comments imported from the CX-Programmer.
Example of Easy Address Allocation

(2) Check the comment then drag-and-drop the symbol from the symbol table to the property list.

GreenLight	BOOL	00010.02	Go
STOP_BUZZER	BOOL	00010.03	Buzzer STOP Button
RedTimerDone	BOOL	TU00001	

Drag & Drop
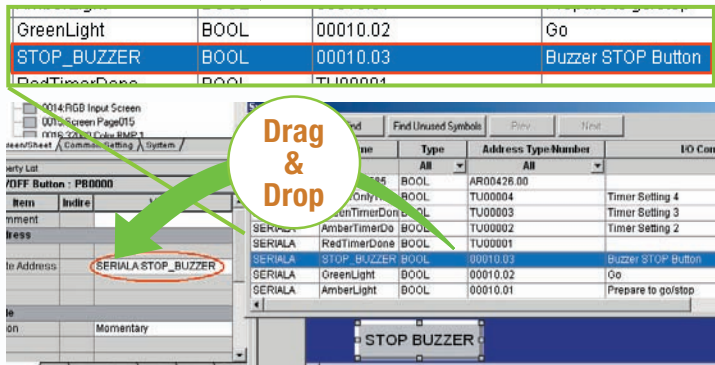

Example of Reading I/O Comments

If Use I/O comment is selected in advance for the Use symbol text as label, the I/O comments are automatically used as labels when addresses are dragged and dropped from the symbol table. (If Use symbol names is selected, the symbol names are used as the labels.)

Drag & Drop

The I/O comment is used as the label.

PARKING

25
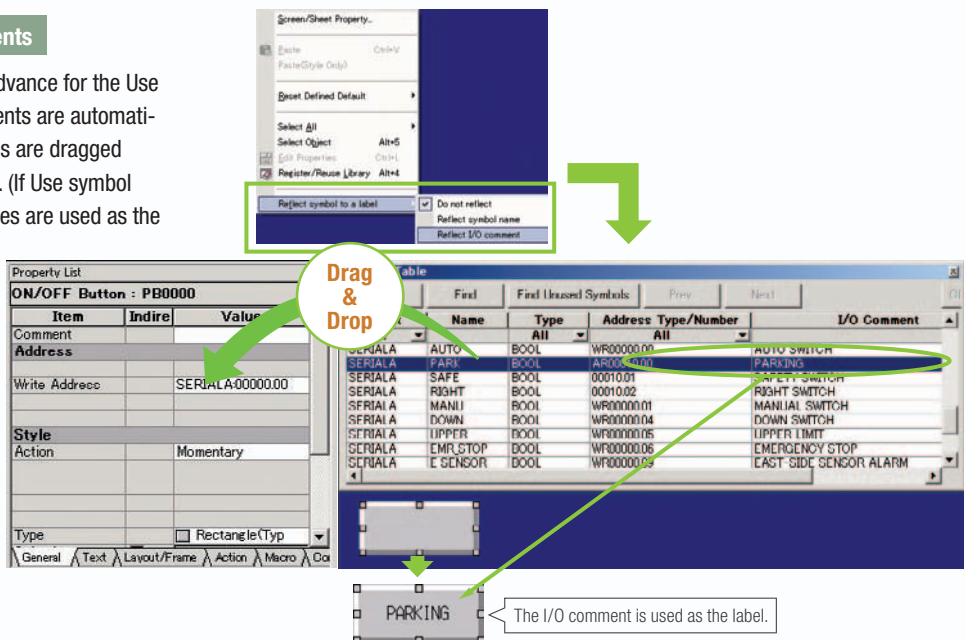

260,000-color Video Display

Equipment and workpiece movements can also be displayed in beautiful video

NS-CA001 Video Input Unit
Four video inputs or CCD cameras can be connected and up to four images can be displayed simultaneously if the image size is 320x240 pixels. The NS-CA001 cannot be used with the NS5 or the NS15.

NS-CA002 RGB/Video Input Unit
There is an analog RGB input terminal in addition to the two video input terminals. Either of the video signals or the analog RGB signal can be displayed on the NS-series PT. The NS-CA002 cannot be used with the NS5.

Note: Video input cannot be used with the NS15.
Only RGB input can be used.

Console

Camera

RGB

Console

Camera
Also Compatible with OMRON Vision Sensors.
Analog RGB Output

The NS screen is seen by another monitor.

The NS15 screen (XGA) can be displayed on an on-site display that has RGB inputs.

Note: Only NS15

FTP Function

You can partially replace text and pictures from your computer.

FTP (File Transfer Protocol) has been added! Texts, lists, and recipes can be replaced with the put/get command from your computer! You can even replace BMP files from your computer easily.

If(Date=0526)
FTP 192.xxxx
xxxx
mput *.bmp

Screens, bitmaps, text, recipe data

Replace the wafer.
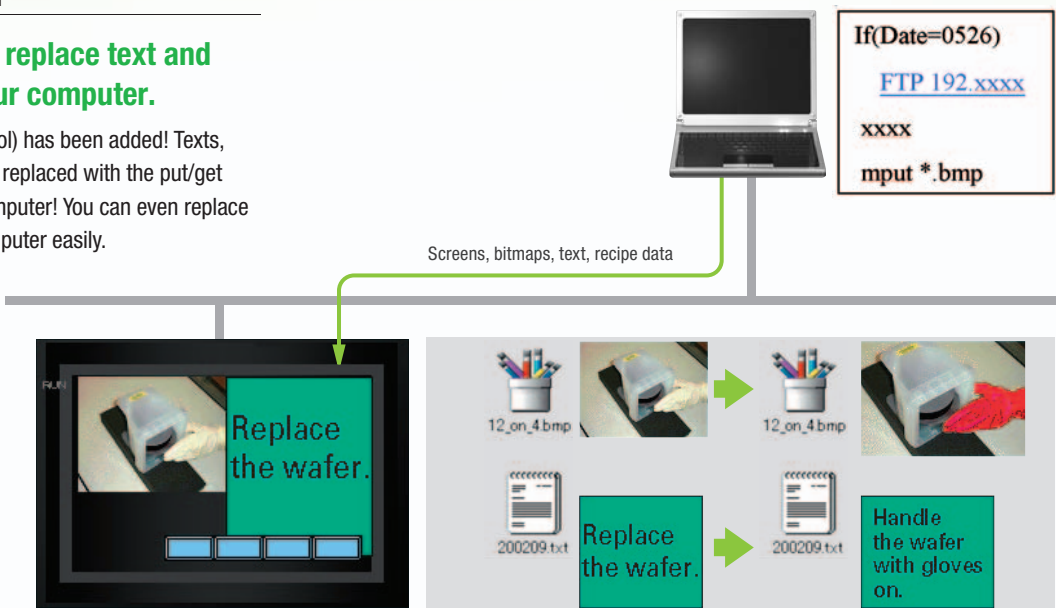

User Security Functions

Operator access rights and the operating format can be set to one of five password levels.

Each operator can be given one of 5 password levels using the User Security (level authentication) function. A password level can be set for each object, so various objects can be made inoperable or hidden based on the operator's access level.

Low	Level 1
	Level 2
	Level 3
	Level 4
High	Level 5

Operator passwords are managed in 5 levels. Passwords can be up to 16 characters long and the access rights increase as the level number increases.

The operator cannot manipulate objects with a password level (authentication level) higher than the operator's login level.

NS with LED backlight

NS5 color-type models (SQ/TQ models), NS8 models, NS10 models, NS12 models with LED backlight are newly released.*

LED backlight allows backlight brightness adjustment of up to 32 levels. The brightness can be adjusted from the operation screens, and the RUN indicator changes its luminance according to the settings of the backlight brightness; it is favorable for ship and vessel applications.

*LotNo.15Z0 or later of NS5 color-type models, LotNo.28X1 or later of NS8 models, LotNo.11Y1 or later of NS10 models, LotNo.14Z1 or later of NS12 models.

PLC Data Trace

The PLC data trace function can be used without a computer.

The PLC Data Trace function is built into the PT in addition to the Ladder Monitor and Device Monitor. A bit's status and operation can be viewed in a time chart just by setting the desired PLC bit's address in the PT. It is also now possible to display word data, save data in CSV files, and save time chart screens in BMP files.

Note 1: There are differences between this Data Trace function and the CX-Programmer's Data Trace function. Refer to the NS-series Programmable Terminal Programming Manual (Cat. No. V073) for details.
Note 2: The PLC data trace function cannot be used with the 5.7-inch model.
Note 3: The PLC data trace function is not supported for connection with a CP1E PLC.

Data Trace

CS/CJ/CP-series PLC
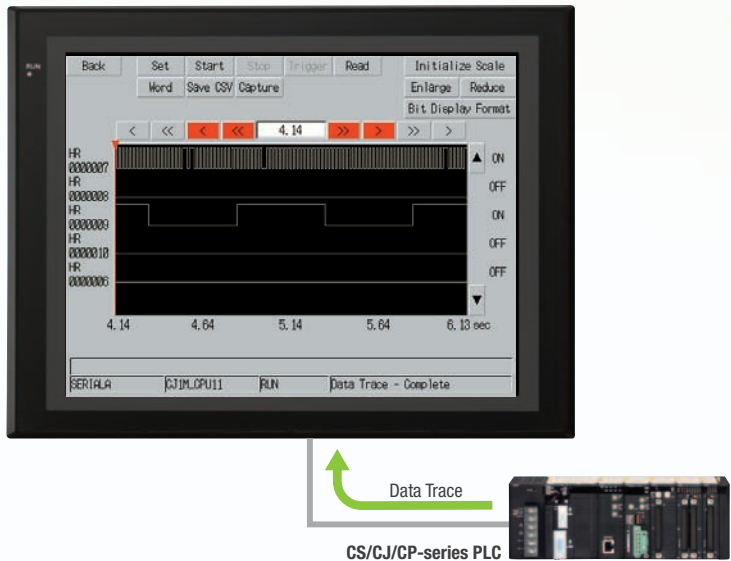

Operating log

What Was Touched When? can be recorded.

Functionality has been improved with the addition of a log to record operators' use of the panels. It is now possible to record and display the time, date, and operation details for buttons (i.e., hardware switches) pressed on the control panel in addition to operations on the touch panel. The operation log can be saved in a CSV file on a Memory Card mounted in the NS-series PT.

Switch directly from the user screen to the log operation display screen.

A comment of up to 32 characters can be set and displayed for each operation to provide easy-to-understand information about what type of operation was performed.

Multiple operation log files can be saved on a Memory Card with date and time data.

Memory Card

Operat_080520_173000.csv
Operat_080521_173000.csv
Operat_080522_173000.csv

The files can be opened in Excel.

For example, with a control panel comprised of the NS-series PT, hardware switches, and an emergency stop button, you can even record and display operation of the emergency stop button.

Maintenance

Ladder Monitor

The ladder program can be monitored without a computer.

Ladder programs with I/O comments can be monitored on the PT's screen and the ladder program can also be edited with the Programming Console function.

Operation screen

CS/CJ/CP-series PLC
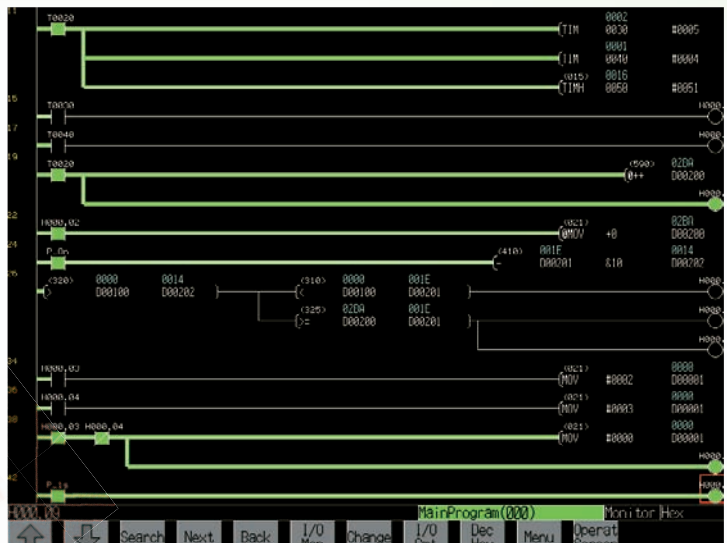

Also meets the requirements of users who need to display devices onsite

Switch Box Function

The operator can check the PLC status by displaying just the I/O comments and status.

Device Monitor Function

Displays the device's contents, allowing settings to be input and checked and making startup operations more efficient.

Switch Box Function

Device Monitor Function

so no extra work to show I/O comments

Read I/O comments directly from the PLC. I/O comments do not have to be stored in a Memory Card.

Select Read I/O Comment Reading from the Menu.

The I/O comments are displayed.
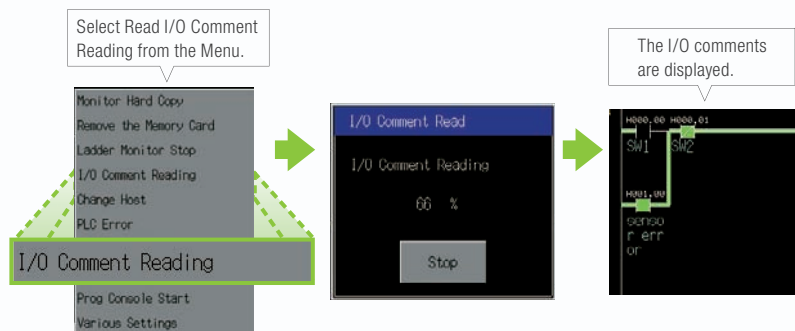

Easy checking the alarm bit and shortens searching time.

When an alarm occurs, touch the message to automatically search for the alarm bit (output bit) for the alarm. This enables you to quickly check the alarm address and investigate why the bit turned ON.

Found it!

"Find Back", "Find Next", useful Function Supported by the NS-series.

Reduced Time to Investigate Which Output or Input Is Causing the Problem.

Function	Operation with NS-series PT.	CX-Programmer
Find the address at specified by the cursor.	Next	"N" Key
Find the output from the input bit or find the input bit from the output at the cursor.	Double-click	"Space" Key
Return to the previous search position.	Back	"B" Key

2. Is this input the cause? What output corresponds to this input?

4. Which of these two inputs is the cause? Let's look at CIO 21.00 first.

6. So is it input CIO 21.01 after all?

Yes, the problem is here!

1. Why is this output not turning ON?

3. Why is this output not turning ON?

5. There's no problem with input CIO 21.00. Let's go back to the previous program section.

Back

Force-setting and force-resetting are possible

Locations that have been force-set are displayed in pink and can be checked at a glance.

1. Select the input bit for which the output will be forced ON.

2. Select the address by touching the panel.

3. Select the Forced Set Option and then press the Update Button.

Change

4. Forced ON

Minor changes in values of timers or counters can be made without Support Software.

Check and Change I/O While You View the Ladder Diagram on the I/O Monitor

Display and change the present value by specifying the address. It is also possible to force-set/reset bits with the I/O monitor.

Make the selection with the I/O monitor by touching the screen.

Changing the present value of the address selected with the Change Value Button

Note: The Ladder Monitor function is not supported by the 5.7-inch models.

NS-Runtime

NS-NSRCL☐ (NS-Runtime)

Achieve machine/line monitoring and data logging on your office computer.

Machine Viewer

Machine monitoring in an office environment. There is no need to create complex host applications. Moreover, when an alarm occurs, a PDF file can be displayed as maintenance information. NS Series screens can be reused on the computer, and screens can be also newly created independently of touch panels at the production site.

Monitoring Device Alarms

Displaying Maintenance Information (PDF File)

Ethernet
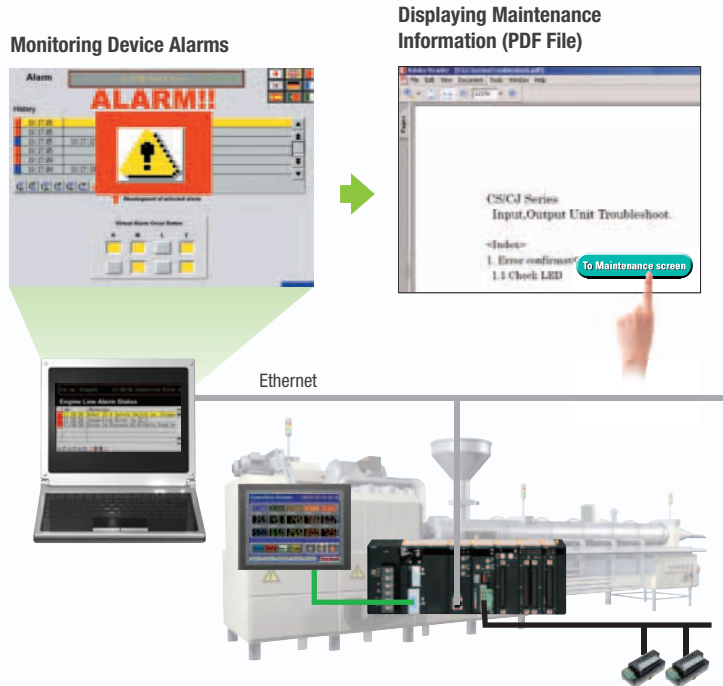

Wide Screen

Computer output can be displayed on another wide-screen monitor. XGA (1,024 x 768 dots) and up to a a maximum screen size of 3,840 x 2,400 is supported. Alarms occurring in devices or the line can be monitored.

MAX 3840pixel

MAX 2400pixel

Monitor output

Note: The resolution that can be displayed depends on the computer. An input function for displaying the computer screen is required at the display monitor.
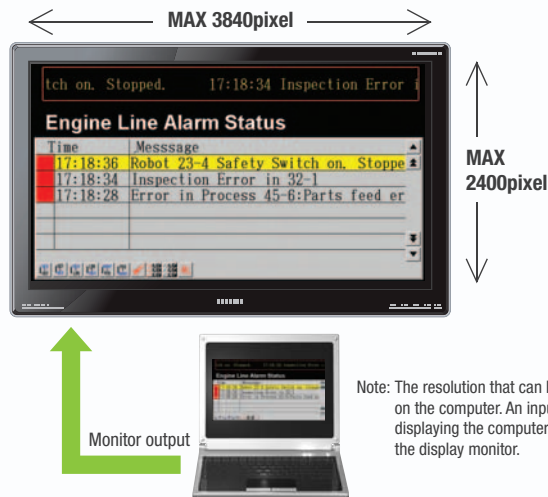

Data Logger

Log large amounts of data using a personal computer. Data can be logged through background processing, with up to 160,000 points stored in one file. The logged data is stored in CSV format, and data can be displayed on data log graphs.

CSV format

Stored Data
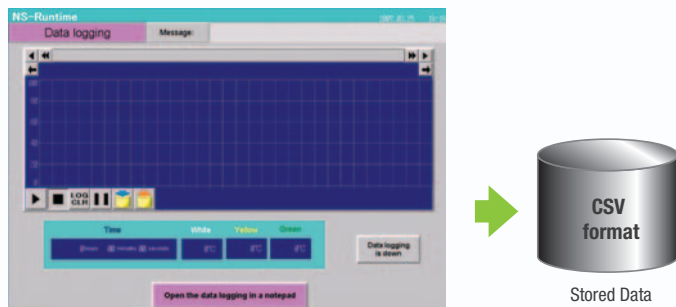

Example: 160,000 Points

Data can be logged for approximately 7.4 days, assuming data is logged every two seconds for 12 hours a day. By using automatic file saving, data logging can be continued even longer than 7.4 days.

Recipe Handling

Checking machine data or switching processes from a host computer is easy. Parameter groups in the PLC can be transferred together to a computer, and the transferred data can be checked and edited in CSV format, e.g., using Excel. The edited data can then be transferred together back to the PLC.

CSV format

Recipe data

	A	B			
1	001	CJ1G			
2	002	CPM2A	55	18	100
3	003	D4JL	2	20	200
4	004	E5CN	3	30	300
5	005	F3SJ	4	40	400
Easy Installation

To get started, just install the NS-Runtime in the computer and place the screen data in the applicable folder. NS/NSJ-series screens and NS-Runtime screens can all be managed using one single tool.

Note: The NS-Runtime will operate in a computer environment even if the CX-Designer installed is not installed. The hardware key (USB dongle) that is supplied with the NS-Runtime is required for operation.

NS-Runtime

Screen Data

To PLC

Screen designer: CX-Designer (CX-One)
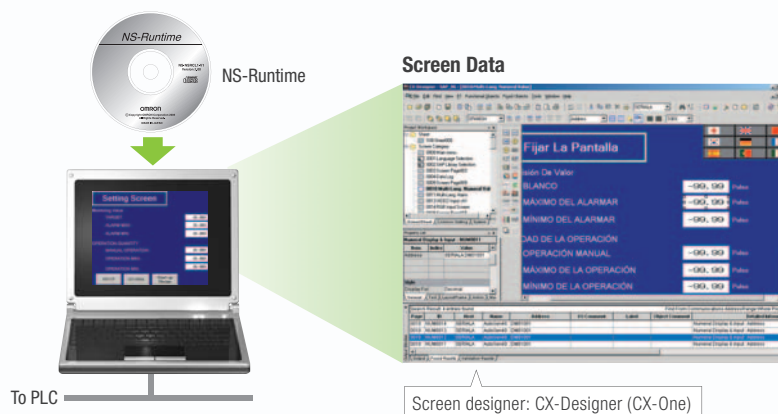

Application Startup Function

User applications can be started from NS-Runtime. Applications can be started simply by pressing buttons on the screen.

NS-Runtime

Started

For example, to start an application by pressing a button… Use the EXEC( ) macro.

Example: EXEC("C:ProgramFiles\Micros..\EXCEL.EXEC:\..\ TEST2.xls…..);

Note: As much as possible, keep applications closed that are not required for operation.

User application

	A	B	C	D	
1	Setting Item	Parameter	Pressure	Oil	W
2	Common parameter	1	600	600	
3	Production unit	2	700	700	
4	Frequency of occurrence of alarm	3	800	800	
5		4	900	900	
6	Read from PLC	Write to PLC	Print		
7					

Note 1: If the screen data is converted for the NS Series, NS-Series PT system versions must be 8.1 or earlier. The screen data of system version 8.2 can not be converted for the NS-Runtime.
Note 2: Do not use this product for 24-hour operation in an FA environment. OMRON shall not be responsible if the computer or application does not operate properly due to noise or other causes. OMRON shall not be responsible for any problems that may be caused by any applications other than OMRON products.

Hand-held PT

NSH5 Series

A hand-held version of the NS5 is now available to perform operations at the production site. The NS-series PT's have a complete set of functions that can be used at the production site, such as the SAP Library, multi-language support, and Programming Console functions.

Function Switches
Use the ten functions switches.
F1, F2, F6, F7: Wired outputs
F3 to F5, F8 to F10: Communications outputs

3-Position Enable Switch
Increased safety with DPST-NO structure (wired outputs).

Memory Card Interface and USB Slave Connector.
Easily transfer screens or save logs at high speed using a USB connection.
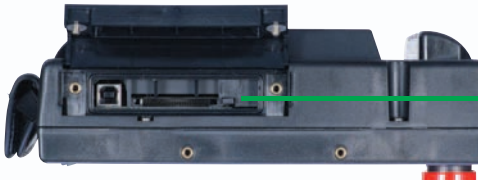

Emergency Stop Switch.
3PST-NC Structure
DPST-NC: Increase safety (wired outputs).
SPST-NC: Input to internal NSH5 memory, output to a lamp for emergency stop switch operation, or output via communications, e.g., to a PLC.

Water Resistance to IP65
The water-resistant structure is equivalent to IP65 on all surfaces. The PT may not be suitable for use in environments with long-term water exposure.

PT and Cable Sold Separately
Select the Cable according to the application (RS-232C/RS-422A).
Connector-loose wires,
UL connector,
3 m or 10 m.

Precautions for Emergency Stop Switches

When using a hand-held NSH5 that will be installed and removed from a control panel or Removable Box, always use the specified Stop Switch (Gray/NSH5-SQG10B-V2) to conform to Safety Standards (EN 60204-1).

Options

Removable Box
A separate external circuit is not required because the Removable Box has been configured so that the emergency stop switch line will not turn OFF (i.e., so that the emergency stop circuit will operate) even when the NSH5 is removed.

Visor
Use when the NSH5 is in direct sunlight.

Mounting Bracket
Use to attach the NSH5 to a control panel.

Features

- 5.7 to 12.1 inch sizes are available.
- A hand-held version of the NS5 is now available to perform operations at the production site. The NS-series PT's have a complete set of functions that can be used at the production site.
- The Smart Active Parts(SAP Library) makes it easy to connect to OMRON PLCs and components, OMRON provides a development environment that requires with no programming and no screen designing.
- When an error occurs in a Unit in the OMRON PLCs, the Troubleshooter SAP Library provides an easy-to-understand explanation of the cause of the error as well as the countermeasures.
- Ladder Monitor come as a Standard Feature. The ladder program can be monitored onsite without a laptop! Ladder monitor lets you monitor PLC program status, search for addresses or instructions, monitor multiple I/O points, and much more.
- Provides the FA integrated tool package "CX-One" for a Screen Design Software Integrated Simulation come as a Standard Feature. The integrated simulation function simulates ladder programs and screen data simultaneously even without the actual hardware.
- Screens support 42 languages and the Support Software supports eight. System messages can be displayed in eight languages.
- Single Port Multi Access (SPMA) come as a Standard Feature. The ladder program and screen data can be transferred from a single port!
- Connectable PLCs and devices appear one after another.
  Has become connectable with the PLCs of Mitsubishi Electric Corporation and the Inverters of OMRON Corporation.

NS Series

Network

Provides serial NT Link communications supporting both 1:1 and 1:N connections. The NT Link has more efficient communications than Host Link and its capabilities are especially apparent in applications with multiple PTs connect to the PLC. The NS-series PTs can also support communications with multiple PLCs and multiple NS-series PTs through Controller Link and Ethernet connections, so the network can be configured freely to match the requirements and scale of the application. In addition, using the NS-Runtime makes it possible to monitor machine status and log data from the host.

∗**1.** As of July 2008, the image memory has been increased to 60 MB.
∗**2.** Lot No. 15Z0 or later of NS5 color-type models, Lot No. 28X1 or later of NS8 models, Lot No. 11Y1 or later of NS10 models, Lot No. 14Z1 or later of NS12 models.

NS-Runtime

Product name	Specifications		Media	Model	Standards
NS-Runtime	NS-Runtime Installer, PDF manual, hardware key (See note.)	1license	CD	**NS-NSRCL1**	–
		3 licenses		**NS-NSRCL3**	
		10 licenses		**NS-NSRCL10**	

Note: A hardware key (USB dongle) is required for NS-Runtime operation.

●System Requirements

Item	Specifications
OS	Windows XP (Service Pack 3 or higher), Vista, 7 or 8 (Support 64-bit version for Windows 7 and Windows 8.)
CPU	Celeron, 1.3 GHz or higher (Recommended)
Memory size	HDD: 50 MB min., RAM: 512 MB min. (Windows 7: 1 GB min.). 50 MB is required for the Runtime alone. (An additional 280 MB is required if CX-Server is not already installed.)

Software

●How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Item	Omron PLC System	Omron Machine Automation Controller System
Controller	CS, CJ, CP, and other series	NJ-series
Programmable Terminals	NS-series	NS-series with an Ethernet port
Software	FA Integrated Tool Package CX-One	Automation Software Sysmac Studio

●FA Integrated Tool Package CX-One

Product name	Specifications	Number of licenses	Media	Model	Standards
FA Integrated Tool Package CX-One Ver.4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. Windows XP (Service Pack 3 or higher), Vista, 7 or 8 **Note:** Except for Windows XP 64-bit version CX-One Version 4.□ includes CX-Designer Ver.3.□. For details, refer to the CX-One catalog (Cat. No. R134)	license *1	DVD *2	**CXONE-AL01D-V4**	—

*1. Multi licenses are available for the CX-One (3, 10, 30, or 50 licenses).
*2. The CX-One is also available on CD (CXONE-AL□□C-V4).

●Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications			Model	Standards
		Number of licenses	Media		
Sysmac Studio Standard Edition Ver.1.□	The Sysmac Studio provides an integrated development environment to set up, program, debug, and maintain NJ-series Controllers and other Machine Automation Controllers, as well as EtherCAT slaves. Sysmac Studio runs on the following OS. Windows XP (Service Pack 3 or higher, 32-bit version) /Vista (32-bit version) /7 (32-bit/64-bit version)	- (Media only)	DVD	**SYSMAC-SE200D**	—
	The Sysmac Studio Standard Edition DVD includes Support Software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer). For details, refer to the Sysmac Integrated Catalogue (P072).	1 license*	—	**SYSMAC-SE201L**	—

Note: 1. To connect the NJ5 Controller, NS system version 8.5 or higher is required. CX-Designer version 3.3 or higher is also required.
       2. To connect the NJ3 Controller, NS system version 8.61 or higher is required. CX-Designer version 3.4 or higher is also required.
* Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses).
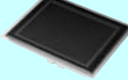

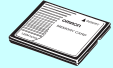

Cable

| Product name	Specifications		Model	Standards
Cable *1	Screen transfer cable for DOS/V (CX-Designer ↔ PT)	Length: 2 m	**XW2Z-S002**	–
	USB-Serial Conversion Cable	Length: 0.5 m	**CS1W-CIF31**	N
	USB relay cable	Length: 1 m	**NS-USBEXT-1M**

NSH5 Removable Box Cable	RS-232C Cable (connectors)	Length: 3 m	**NSH5-232CN-3M**	
		Length: 10 m	**NSH5-232CN-10M**	
NSH5 Removable Box	–		**NSH5-AL001**	
NSH5 Wall-mounting Bracket	–		**NSH5-ATT02**	
NSH5 Visor	–		**NSH5-ATT01**	

∗1. Use a standard USB Type A male to Type B type male Cable to connect the NS series PT to a personal computer (CX-Designer).
   Use a standard USB cable to connect the NS series PT to a PictBridge-compatible printer. USB cable type depends on the printer.
∗2. To connect the NS series PT to NJ series Controller, using a commercially available 10/100-BASE-TX twisted-pair cable.
   For detail, refer to the NS series SETUP MANUAL (Cat. No.V083).

General Specifications

NS5/NS8/NS10/NS12/NS15

Series	NS5-V2	NS8-V2	NS10-V2	NS12-V2	NS15-V2
Rated power supply voltage	24 VDC				
Allowable voltage range	20.4 to 27.6 VDC (24 VDC ±15%)				
Power consumption	15 W max.	25 W max.			45 W max.
Ambient operating temperature	0 to 50 °C (See note on the next page.) **Note:** The ambient operating temperature is subject to the following restrictions according to the mounting angle. Mounting angle of 0 to 30° to the horizontal: • When no Expansion Units are mounted, the operating temperature range is 0 to 45°C. • When a Video Input Unit or a Controller Link Interface Unit is mounted, the ambient operating temperature is 0 to 35°C. Mounting angle of 30 to 90° to the horizontal: Operating temperature range of 0 to 50°C				
Storage temperature	−20 to 60 °C *1				
Ambient operating humidity	35 to 85% (0 to 40 °C), 35 to 60% (40 to 50 °C) (with no condensation)				
Operating environment	No corrosive gases.				
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power lines).				
Vibration resistance (during operation)	10 to 57 Hz, 0.075 mm amplitude, 57 to 150 Hz, 9.8 m/s² 30 min each in X, Y, and Z directions				5 to 8.4 Hz, 3.5 mm single amplitude, 8.4 to 150 Hz, 9.8 m/s² 10 min times each in X, Y, and Z directions
Shock resistance (during operation)	147 m/s² 3 times each in direction of X, Y, and Z				
Weight	1.0 kg max.	2.0 kg max.	2.3 kg max.	2.5 kg max.	4.2 kg max.
Degree of protection	Front operating panel: Equivalent to IP65 oil-proof type and NEMA4 UL type 4. *2 **Note:** May not be applicable in locations with long-term exposure to oil.				
Ground	Ground to 100 Ω or less.				
Battery life	5 years (at 25 °C): Replace battery within 5 days after the battery runs low (indicator lights orange).				
Applicable standards	Certified for conformance to UL 508, UL 1604, EMC Directive, NK, and LR Standards.				

∗**1.** Operate the PT within the temperature and humidity ranges shown in the right diagram.
∗**2.** Support for NS5, NS10, NS12 and NS15.

NSH5 Hand-held PT

Series	NSH5-V2	
Type	5.7-inch Color TFT (Hand-held Version)	
Case color	Black	
Built-in Ethernet port	No	
Model	NSH5-SQR10B-V2 (Emergency stop button: Red)	NSH5-SQG10B-V2 (Stop button: Gray)
Rated power supply voltage	24 VDC	
Allowable voltage range	20.4 to 27.6 VDC (24 VDC ±15%)	
Power consumption	10 W max.	
Ambient operating temperature	0 to 40°C	
Storage temperature	−20 to 60°C	
Ambient operating humidity	35% to 85% (0 to 40°C) with no condensation	
Operating environment	No corrosive gases.	
Noise immunity	Common mode: 1,000 Vp-p (between power supply terminals and panel) Normal mode: 300 Vp-p Pulse width: 100 ns to 1 μs, Rise time: 1-ns pulse	
Vibration resistance (during operation)	10 to 57 Hz, 0.075 mm amplitude, 57 to 150 Hz, 9.8 m/s² 30 min each in X, Y, and Z directions	
Shock resistance (during operation)	147 m/s² 3 times each in direction of X, Y, and Z	
Weight	1 kg max.	
Degree of protection	Equivalent to IP65.	
Ground	Ground to 100 Ω or less.	
Battery life	5 years (at 25°C): Replace battery within 5 days after the battery runs low (indicator lights orange).	
Applicable standards	Certified for conformance to UL 508, EMC Directive, and EN 60204-1.

Video Input Unit support		Not supported											
Controller Link Interface Unit (Wired) support		Not supported											
Backlight *2	Service life * 3	50,000 hours min.				75,000 hours min.							
	Brightness adjustment	There are 3 levels that can be set with the touch panel. * 4				Three-level or 32-level brightness adjustment from the touch panel screen. * 5							
	Backlight error detection *6	Error is detected automatically, and the RUN indicator flashes green as notification.											
Touch panel (matrix type)	Method	Matrix resistive membrane											
	Number of switches/ resolution	300 (20 horizontal × 15 vertical) 16 × 16 dots for each switch											
	Input	Pressure-sensitive											
	Service life	1,000,000 touch operations.											
Display text	Labels	Can be specified in CX-Designer. Font, style, and size can be specified.											
	Numerals, alarms, and character strings	Scalable Gothic: Magnification: 6 to 255 points Rough: Magnification: 1×1, 1×2, 2×1, 2×2, 3×3, 4×4, 8×8 Standard: Magnification: 1×1, 1×2, 2×1, 2×2, 3×3, 4×4, 8×8 Fine: Magnification: 1×1, 1×2, 2×1, 2×2, 3×3, 4×4, 8×8 7-segment display: Can display only numerals, dates, and times.											
	Supported languages (42 languages)	Scalable Gothic, rough, standard, and fine can be used for 42 languages. Japanese, simplified Chinese, traditional Chinese, Korean, English, French, German, Italian, Portuguese, Spain, Swedish, Dutch, Finnish, Norwegian, Basque, Catalan, Danish, Albanian, Croatian, Czech, Hungarian, Polish, Romanian, Slovak, Slovenian, Bulgarian, Belarusian, Russian, Serbian, Macedonian, Ukrainian, Georgian, Icelandic, Afrikaans, Faroese, Indonesian, Greek, Turkish, Estonian, Latvian, Lithuanian, Thai (supported only with scalable Gothic font)											
Text attributes	Color	Monochrome, 16 gradations				256 colors							
	Font style (only when vector font is specified)	Bold or italic											
	Vertical alignment	Top, center, or bottom											
	Horizontal alignment	Left-justified, centered, or right-justified											
Flicker	Objects supporting flicker	Functional objects: Select from up to 10 types of registered flicker settings. The flicker speed and flicker range can be set. Fixed objects: Select from three flicker types.											
Numeral units and scale settings		1.000 max.											
Alarm/event settings		5,000 max.											
Expansion interface		For Expansion Interface Units											

∗1. NS5-TQ series (high luminance TFT) luminance is better than that of NS5-SQ series by about 110 cd/m².
∗2. Contact your nearest OMRON representative to replace the backlight.
∗3. This is the estimated time before brightness is reduced by half at room temperature and humidity. It is not a guaranteed value.
   The service life will be dramatically shortened if PT is used at low temperatures. For example, using the PT at temperatures of 0°C will reduce the service life to approximately 10,000 hours (reference value).
∗4. The brightness cannot be adjusted much.
∗5. Lot No. 15Z0 or later of NS5 models.
∗6. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors.
   Backlight error detection indicates that all backlights (2) are OFF.

	Vertical alignment	Top, center, or bottom													
	Horizontal alignment	Left-justified, centered, or right-justified													
Flicker	Objects supporting flicker	Functional objects: Select from up to 10 types of registered flicker settings. The flicker speed and flicker range can be set. Fixed objects: Select from three flicker types.													
Numeral units and scale settings		1.000 max.													
Alarm/event settings		5,000 max.													
Expansion interface		For Expansion Interface Units													

*1. Contact your nearest OMRON representative to replace the backlight.
*2. This is the estimated time before brightness is reduced by half at room temperature and humidity. It is not a guaranteed value.
The service life will be dramatically shortened if PT is used at low temperatures. For example, using the PT at temperatures of 0 °C will reduce the service life to approximately 10,000 hours (reference value).
*3. Lot No. 28X1 or later of NS8 models, Lot No. 11Y1 or later of NS10 models, Lot No. 14Z1 or later of NS12 models.
*4. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors.
Backlight error detection indicates that all backlights (2) are OFF.
*5. An analog touch panel is used with the NS15. Do not press the touch panel in two or more places simultaneously.
If the touch panel is pressed in two or more places simultaneously, it may activate a switch between the points that are pressed.

Communications

NS5/NS8/NS10/NS12/NS15

Memory Card		**Interface**	One ATA-Compact Flash interface slot
		Functions	Used to transfer and store screen data, store logging data, and store history data. (Alarm/Event History, Operation Log, and Error Log generated during Macro execution).
Serial Communications	**Port A**	**Connector**	Conforms to EIA RS-232C. D-Sub female 9-pin connector 5-V output (250 mA max.) through pin 6. The 5-V outputs of serial ports A and B cannot be used at the same time.
		Functions	Host (PLC) access: 1:N NT Links (connections with CS/CJ/CP-series PLCs and C200HX/HG/HE(-Z) PLCs), 1:1 NT Links, or Host Link (connections with C Series or CVM1/CV-series PLCs) Direct access to Temperature Controllers using Smart Active Parts: CompoWay / F and bar code reader connections (Read directly from display.)
	Port B	**Connector**	Conforms to EIA RS-232C. D-Sub female 9-pin connector. 5-V output (250 mA max.) through pin 6. The 5-V outputs of serial ports A and B cannot be used at the same time.
		Functions	Host (PLC) access: 1:N NT Links (connections with CS/CJ/CP-series PLCs and C200HX/HG/HE(-Z) PLCs) or 1:1 NT Links (connections with C Series or CVM1/CV-series PLCs) Direct access to Temperature Controllers using Smart Active Parts: CompoWay / F and bar code reader connections (Read directly from display.)
USB SLAVE Specifications		**USB rating**	USB1.1
		Connector	TYPE-B (Slave)
		Functions	Connection with the CX-Designer (for screen data transfers) Connecting to a PictBridge-compatible Printer Recommended printers: EPSON: PM-G4500, PX-G5300, PX-5600, EP-901F Canon: PIXUS MX7600, PIXUS iP100, PIXUS iX5000
USB HOST Specifications *1		**USB rating**	USB1.1
		Connector	TYPE-A (Host)
		Functions	Connection with a printer (for hard copies) Recommended printers: EPSON: PX-G930
Built-in Ethernet Specifications *2		**Conformance standards**	Conforms to IEEE 802.3/Ethernet (10 Base-T/100 Base-TX).
		Functions	Host (PLC) access and connection with the CX-Designer (for screen data transfers)
Controller Link (Wired-type) Specifications *3		**Baud rate**	2 M/1 M/500 K bps
		Transmission path	Shielded twisted-pair cable (special cable)
		Functions	Host (PLC) access and data links
Video Input Specifications *4		**Resolution**	NS-CA001: 320×240, 640×480, 800×600 dots NS-CA002: User-defined size
		Input signal	NS-CA001: NTSC composite video or PAL NS-CA002: NTSC composite video or PAL
		Number of video inputs	NS-CA001: Number of cameras: 4 max. NS-CA002: 2 cameras + RGB

∗**1.** Except NS5.
∗**2.** NS□-□□□1-V2 only.
∗**3.** Except NS5 and NS8.
∗**4.** Except NS5 and NS15. NS15 provides RGB input. (NS-CA002)

∗**1.** To connect a NS with a PLC via a RS-422A connection, OMRON's NS-AL002, or CJ1W-CIF11 RS-232C/RS-422A Converter can be used to convert the RS-232C port on the NS to RS-422A.
∗**2.** A NS with Ethernet port is necessary.
When connecting a PLC with the NS, an Ethernet port is necessary on the PLC, too. Use a PLC CPU Unit with a built-in Ethernet port, or add an Ethernet Unit.
∗**3.** A NS with Ethernet port is necessary.
When connecting a PLC with the NS, an EtherNet/IP port is necessary on the PLC, too. Use a PLC CPU Unit with a built-in EtherNet/IP port, or add an EtherNet/IP Unit.
∗**4.** Install a Controller Link Interface Unit on the NS. A Controller Link Unit is necessary for the PLC.
∗**5.** Mount a Serial Communications Unit on the NJ-series Controller. A NS can access only to the Controller's memory used for CJ-series unit.
∗**6.** When using a EtherNet/IP Unit to connect the NJ-series Controller, NJ Troubleshooter is not supported.
